PROJECTS

Intelligent Measurements Extraction System.
📅 04/2023-05/2024   📍 Ibb-YEM

Graduation project Private project, not open source

- Collaborate with the research team to develop an application for clothing stores to browse products and extract body measurements from a two-dimensional image using a phone and from anywhere.
- Front-end is developed by Fluter and back-end is developed by Firebase.
- Artificial intellgence models have been developed to extract body measurements and link them to the application.

Yemeni Universities Application
📅 10/2024 - 11/2024   📍 Ibb-YEM

Trial version

- Front-end is developed by Flutter and back-end is developed by Firebase.
- Trial version but it did not give the desired results
- Front-end is developed by Flutter and back-end is developed by Firebase.
- I am still developing the application in an advanced way and it will be launched according to the plan at the beginning of the new school year. The application's backend will also be changed to PHP.

E-commerce application.
📅 02/2025 - 04/2025   📍 Ibb-YEM

It consists of three applications

- a users application, a admin application, and a delivery worker application.
- Front-end is developed by Flutter and back-end is developed by PHP.
- Google Maps, Order Tracking.
- It features very easy and distinctive user interfaces.

Inventory Management System
📅 12/2024-01/2025   📍 Ibb-YEM

Inventory Management System

- inventory_management_system in windows-flutter - MVC - GetX-Sqflite. The system allows adding, modifying and deleting products - adding new sales - adding new purchases - managing inventory - brief reports - filtering sales or purchases on a daily, weekly or monthly basis

Coffee app
📅 05/2025-06/2025   📍 Ibb-YEM

Coffee app

- Coffee app enjoy an easy and attractive user interface.
- MVC Architecture - State Management GetX - Google Map- Tracking Order.

Qayd app
📅 11/2025 - 2/2026   📍 Ibb-YEM

Coffee app

- Modular Flutter app (Android/iOS) for financial workflows with authentication, dashboard, settings, and transaction management. Uses Bloc for state management and Sqlite for local storage with platform plugin support.
